

Amazon's Allergen Labelling Requirements (1 Aug 22)

Amazon does not guarantee that its products are suitable for individuals with food allergies or intolerances. While we take care to manage allergen cross contamination with our suppliers and in our stores, there may be a risk through handling and the donation process that products contain, or are at risk of cross contamination, therefore the product should be considered (and labelled) to contain:

1. For non pre-packaged products:

All 14 allergens as specified by Food Standards Agency¹ including: **celery**, **cereals containing gluten** (such as barley and oats), **crustaceans** (such as prawns, crabs and lobsters), **eggs**, **fish**, **lupin**, **milk**, **molluscs** (such as mussels and oysters), **mustard**, **peanuts**, **sesame**, **soybeans**, **sulphur dioxide and sulphites** (if the sulphur dioxide and sulphites are at a concentration of more than ten parts per million) and **tree nuts** (such as almonds, hazelnuts, walnuts, brazil nuts, cashews, pecans, pistachios and macadamia nuts).

2. For pre-packaged products: Products are individually labelled with allergen information.
